PRACTICAL – 1

Creating AWS account

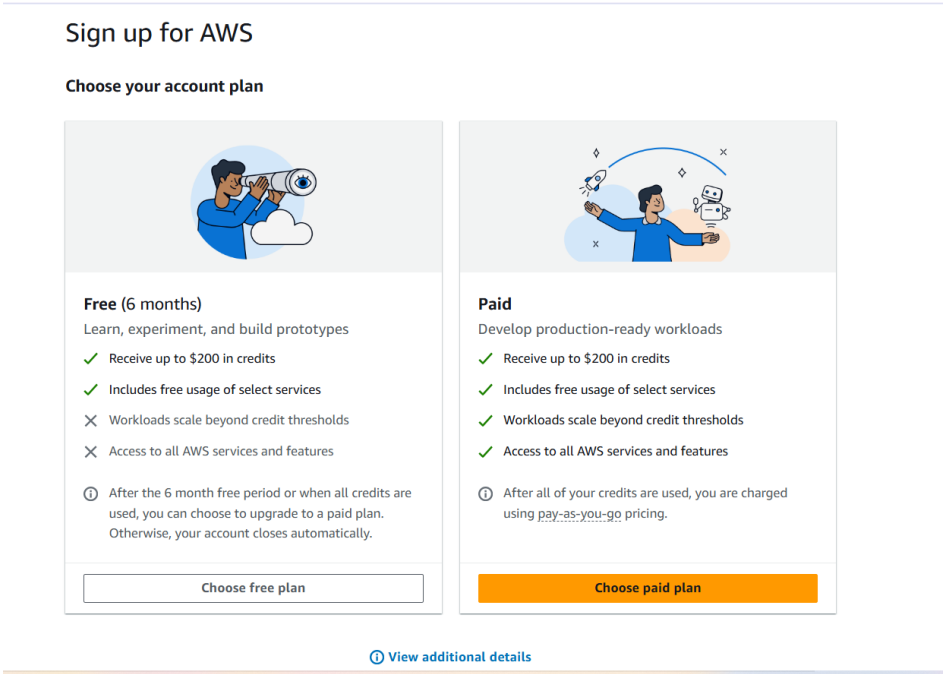

Sign Up

Description: This is the AWS sign-up page. The user enters the root user email address and an account name, then clicks Verify email address to start creating the account.

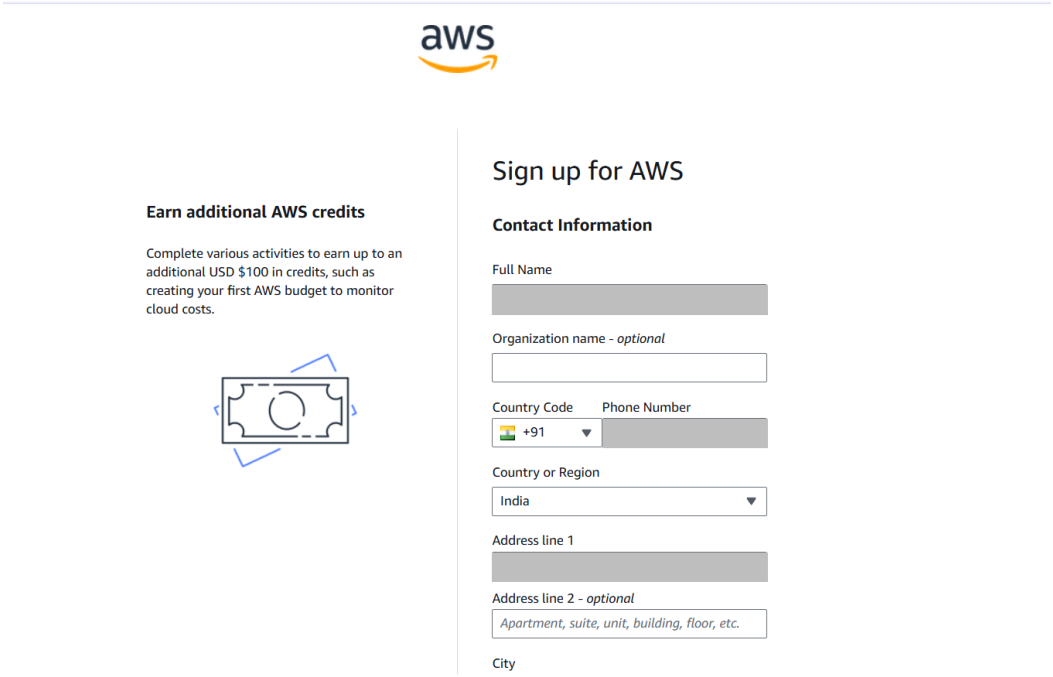

Create Password

Description: After the email is verified, AWS asks for a root user password. The password is typed twice and the page shows "Matches" when both are the same.

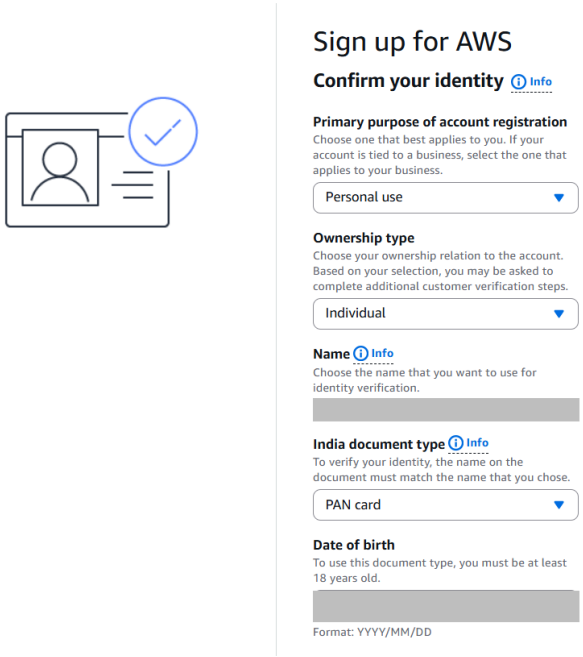

Choose Account Plan

Description: AWS gives two options, the Free plan (6 months) and the Paid plan. The Free plan is good for learning and gives free credits.

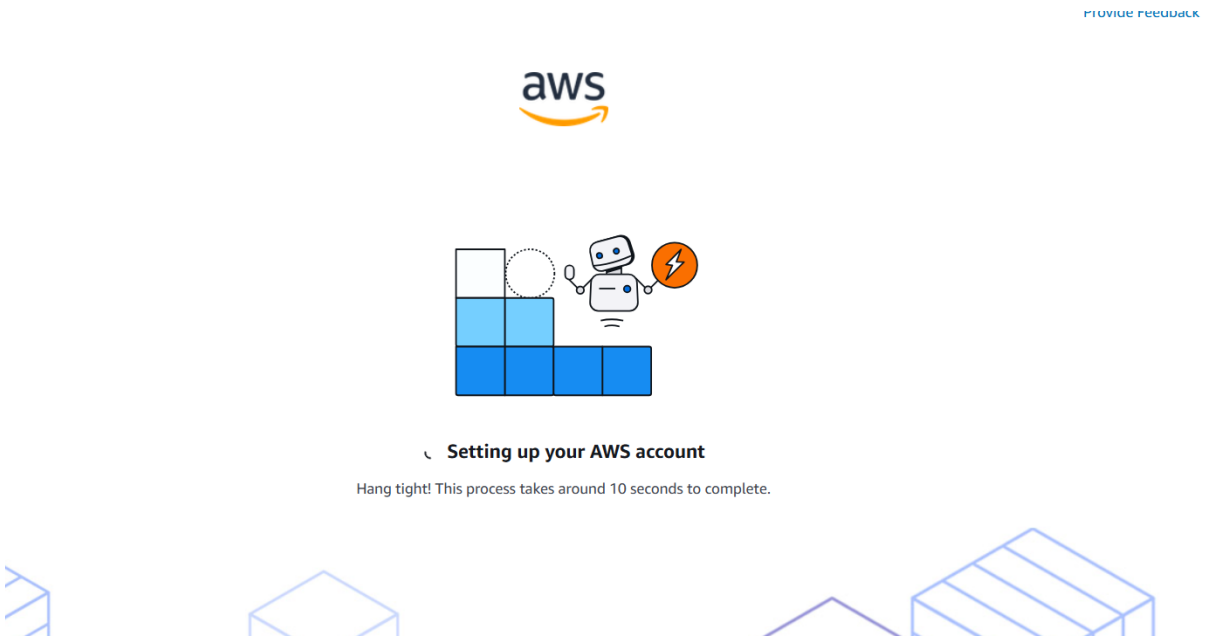

Contact Information

Description: This screenshot shows the registration form where the user gives the full name, phone number, country and address details.

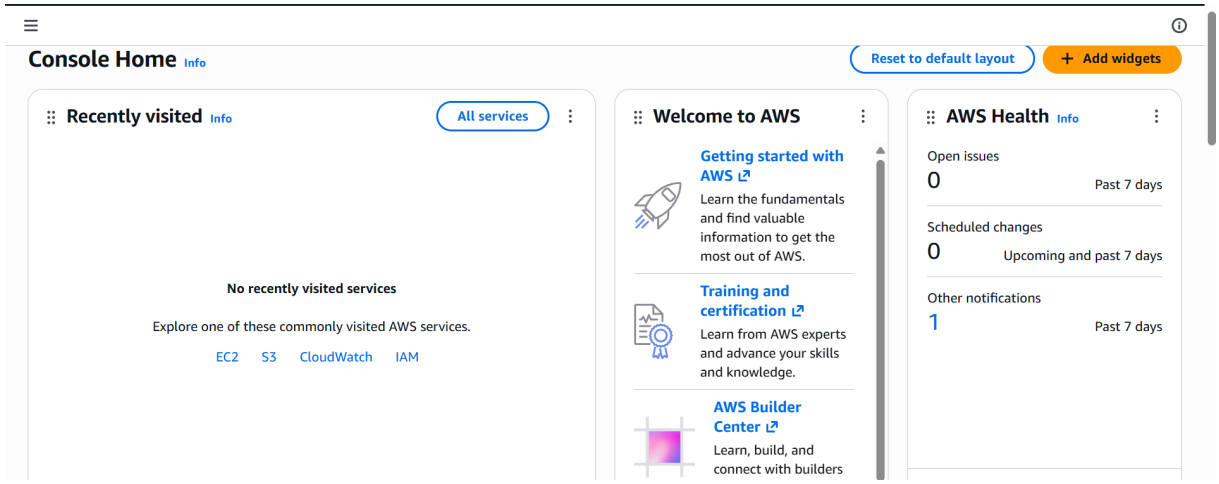

Confirm Your Identity

Description: Here the user selects the purpose of the account (Personal use), the ownership type (Individual), the ID document type (PAN card) and the date of birth.

Setting Up the Account

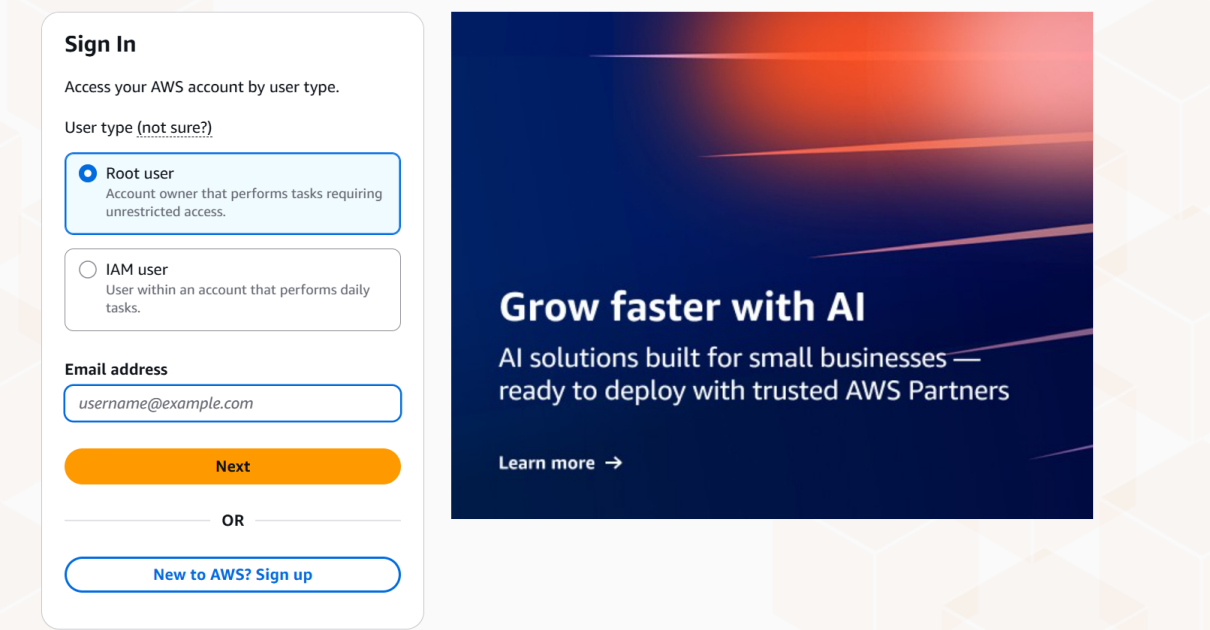

Description: AWS shows a loading screen while it sets up the new account. It takes only around 10 seconds.

Account Created

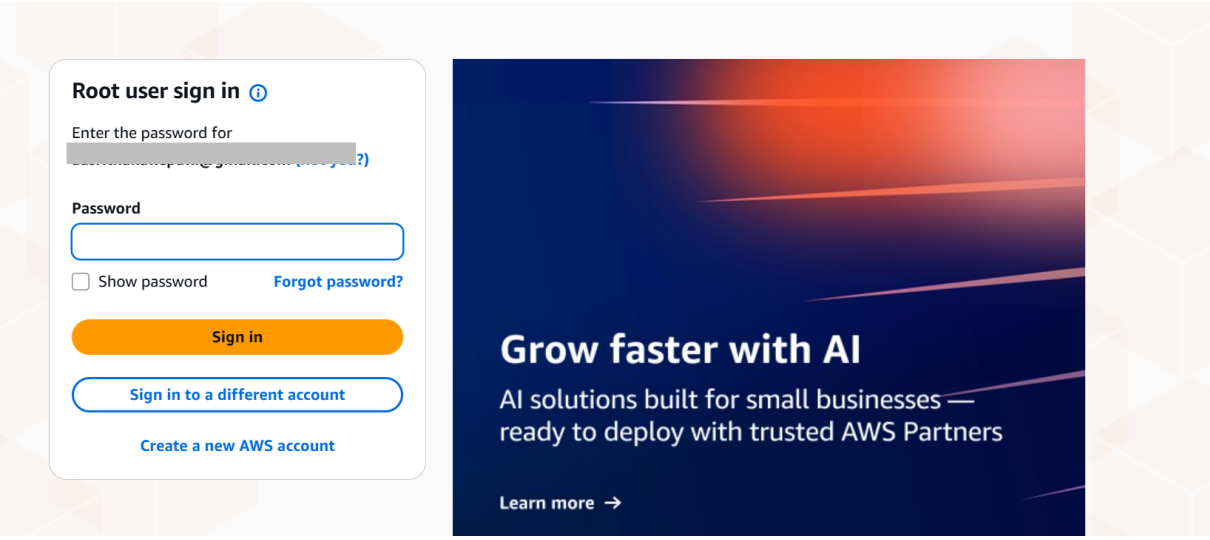

Description: The AWS Console Home page opens, which shows that the account was created successfully.

Sign in

Sign In

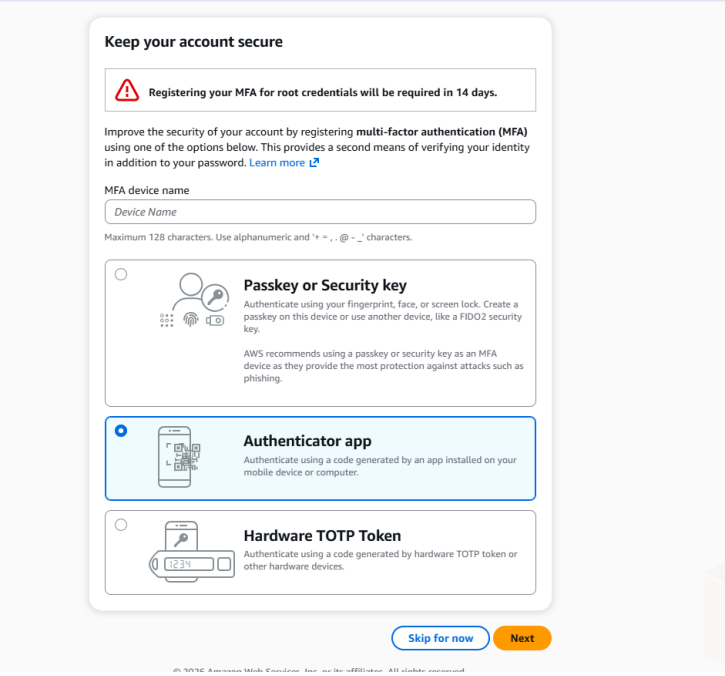

Description: This is the AWS sign-in page. Root user is selected and the email address is entered to continue.

Root User Sign In

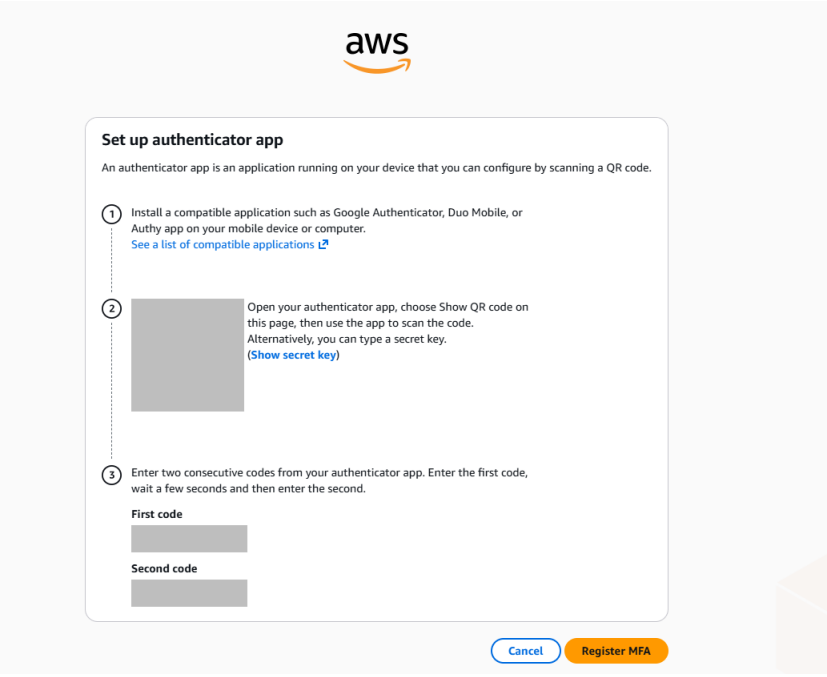

Description: The root user sign-in page asks for the password of the registered email address. This is done before enabling multifactor authentication.

Applying multifactor authentication to AWS account

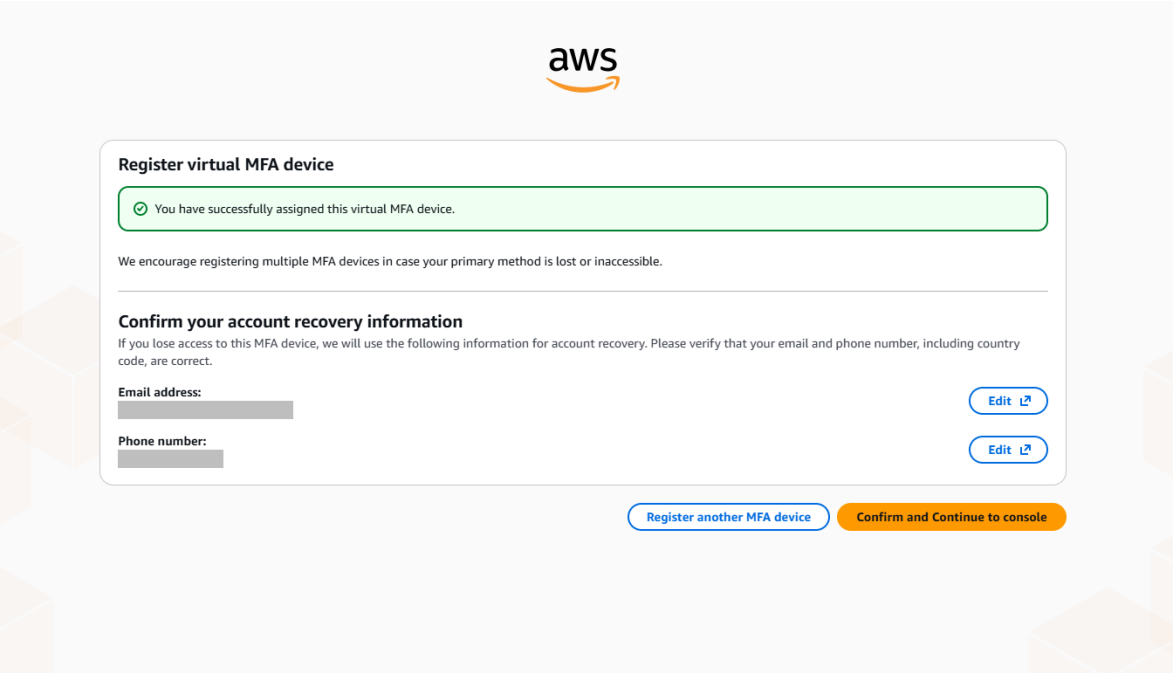

Choose MFA Device

Description: This screen shows the security options for the account. The Authenticator app option is selected to add an extra layer of protection.

Set Up Authenticator App

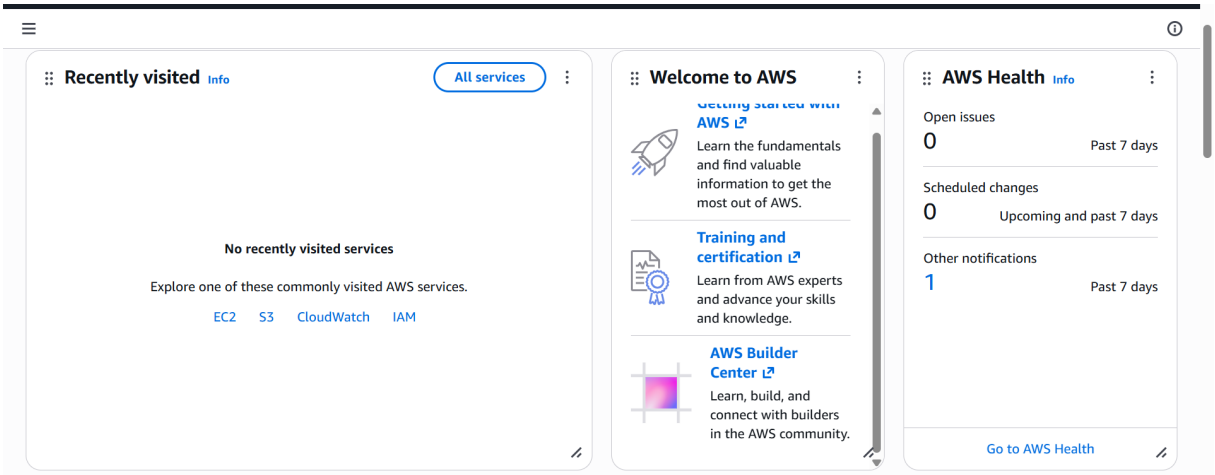

Description: AWS shows the steps to link an authenticator app. The QR code is scanned with the app, and two codes from the app are entered to register the device.

Successfully Registered

Description: The confirmation screen shows that the virtual MFA device was assigned successfully and the account security setup is complete.

Sign in after MFA

Console Home

Description: After signing in with the password and the MFA code, the AWS Management Console home page opens.
